ASSUMPTIONS

all existing product types / combinations are having a coating either explicit or implicit values

FACTS

there are existing logic to weakly define coatings

DECISIONS

we are going to use another data point for cover coating, we are NOT going to use the cover type name

Complexity Matrix

	bookwright	bookwright online	renderer manager	PDF processing	Blurb	Bookserve
Database	MEDIUM	MEDIUM	UNKNOWN		LOW	LOW
Compatibility Mapping	MEDIUM	MEDIUM	UNKNOWN		MEDIUM	MEDIUM
Business rules	LOW	LOW	UNKNOWN		HIGH	HIGH
Presentation	MEDIUM	MEDIUM	UNKNOWN		MEDIUM	MEDIUM

what are all the current enabled creation tools?

A:blurb C:low

are we going to support distribution?

A:blurb C:high

are printers prepared for the material combinations?

A:RPI A:blurb A:andava C:high

which creation tools will be supported?

A:blurb C:high

are there special ways to create and define product specifications? - maybe some plugin...

A:blurb C:high

are there some/existing creation tools that allows to somehow select the coating?

A:blurb C:high

How coating/finish looks like in the PrintTalk XML

A:RPI A:andava C:high Jul 09

is RPI currently relying on the coating description Blurb is sending?

A:RPI A:andava C:high

in Blurb how the default coating values are being managed?

A:andava C:high

impact of: We will remove the Soft Touch laminate that we currently use on our hardcover books.

A:blurb C:high

backward compatibility strategies

A:blurb-dev A:andava C:high

what is the highest priority in terms of group of product type/line

A:blurb C:high

what would be the selected product types?

A:blurb C:high

what would be allowed combinations and exceptions for selected product types

A:blurb C:high
